### **PROGRAM OUTCOME/S (PO) ADDRESSED BY THE LABORATORY EXERCISE**

- Design, implement and evaluate computer-based systems or applications to meet desired needs and requirements. [PO: C]

### **COURSE LEARNING OUTCOME/S (CLO) ADDRESSED BY THE LABORATORY EXERCISE**

- Apply advanced web development principles in creating, debugging, validating, and securing database-backed web applications. [CLO: 2]
- Design program flow and application structure for computing problems using CodeIgniter and Laravel frameworks. [CLO: 3]

### **INTENDED LEARNING OUTCOME/S (ILO) OF THE LABORATORY EXERCISE**

**At the end of this exercise, students must be able to:**

- Design and implement a relational database schema for a small task-management application.
- Build Models and controllers that retrieve and filter records, including filtering by date.
- Produce multiple distinct views — a filtered dashboard, a full listing, a profile page, and a static page — from a shared data layer.

### **BACKGROUND INFORMATION**

This assessment combines the two skills covered so far: organizing an application with MVC (Module 1) and backing it with a real database (Module 2). You will build a small internal tool, the Tasks for Today Management System, that a team could use to track daily to-do items.

A common pattern in dashboards like this is separating a filtered "today" view from a complete, unfiltered listing. Both views read from the same table; only the query differs. This activity asks you to implement both.

### **GRADING SYSTEM / RUBRIC**

| <b>CRITERIA</b>                                                      | <b>Description</b>                                                                                                                             |
|----------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Functionality &amp; Requirements Completeness (35 points max)</b> | All required pages, records, and workflows are present and behave as specified in the activity instructions.                                   |
| <b>Code Structure &amp; Organization (20 points max)</b>             | The application follows the framework's MVC conventions with a clear, consistent separation of concerns across controllers, models, and views. |

| CRITERIA                                                      | Description                                                                                                                                                                   |
|---------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Database Design &amp; Data Retrieval (25 points max)</b>   | The schema is implemented as specified, sample data is realistic and sufficient, and queries correctly filter by date where required and retrieve all records where required. |
| <b>Documentation &amp; Submission Quality (20 points max)</b> | The GitHub repository is organized and complete, the README explains how to set up and run the project, and the hosted link is live and matches the submitted code.           |

## LABORATORY ACTIVITY

Build a Tasks for Today Management System with four pages: a Welcome page showing only today's tasks, a full Task List page showing every task, a Profile page showing one demo user's information, and an About page identifying you as the developer.

1. Create the database and tables using the schema below:

```
CREATE TABLE tasks (
  id INT AUTO_INCREMENT PRIMARY KEY,
  title VARCHAR(150) NOT NULL,
  status VARCHAR(20) NOT NULL DEFAULT 'pending',
  task_date DATE NOT NULL,
  created_at DATETIME NOT NULL
);
```

```
CREATE TABLE users (
  id INT AUTO_INCREMENT PRIMARY KEY,
  username VARCHAR(50) NOT NULL UNIQUE,
  full_name VARCHAR(100) NOT NULL,
  email VARCHAR(100) NOT NULL,
  created_at DATETIME NOT NULL
);
```

2. Populate the tasks table with at least 8 records spanning at least 3 different dates, including today's date.
3. Populate the users table with exactly one demo record.
4. Build a TaskModel and a UserModel.
5. Build the Welcome page (/) to query and display only tasks where task\_date equals today's date.
6. Build the Task List page (/tasks) to query and display every task, ordered by date.
7. Build the Profile page (/profile) to display the single user record.
8. Build a static About page (/about) identifying you as the developer of the system.

## DASHBOARD

The screenshot shows a web browser at localhost:8080 displaying the 'Management System' dashboard. The navigation bar includes 'Dashboard', 'All Tasks', 'Profile', and 'About Developer'. The main section is titled 'Today's Tasks Dashboard' and displays a table of tasks scheduled for September 27, 2026. The table has four columns: ID, Task Title, Status, and Task Date. There are four tasks listed, with the first two marked as 'Completed' and the last two as 'Pending'. A footer note indicates the copyright for 2026 by QUEJADA TA 3.

| ID | Task Title                                | Status    | Task Date  |
|----|-------------------------------------------|-----------|------------|
| 1  | Review IT0049 Lecture Notes               | Completed | 2026-09-27 |
| 2  | Setup CodeIgniter 4 Project environment   | Completed | 2026-09-27 |
| 3  | Create database schema and tables         | Pending   | 2026-09-27 |
| 4  | Implement TaskModel and UserModel classes | Pending   | 2026-09-27 |

## ALL TASKS

The screenshot shows the 'All Tasks' page of the Management System. The navigation bar is the same as the dashboard. The main section is titled 'All System Tasks' and displays a table of all tasks logged within the database management system. The table has four columns: ID, Task Title, Status, and Task Date. There are eight tasks listed, with the first four marked as 'Completed' and the last four as 'Pending'. A footer note indicates the copyright for 2026 by QUEJADA TA 3.

| ID | Task Title                                   | Status    | Task Date  |
|----|----------------------------------------------|-----------|------------|
| 7  | Review relational database normalization     | Completed | 2026-09-25 |
| 8  | Read CodeIgniter Query Builder documentation | Completed | 2026-09-25 |
| 1  | Review IT0049 Lecture Notes                  | Completed | 2026-09-27 |
| 2  | Setup CodeIgniter 4 Project environment      | Completed | 2026-09-27 |
| 3  | Create database schema and tables            | Pending   | 2026-09-27 |
| 4  | Implement TaskModel and UserModel classes    | Pending   | 2026-09-27 |
| 5  | Submit Web System Technologies assignment    | Pending   | 2026-09-28 |
| 6  | Prepare for upcoming technical quiz          | Pending   | 2026-09-28 |

## PROFILE

The screenshot shows a web browser window with the address bar displaying 'localhost:8080/profile'. The browser's address bar also shows icons for CANVAS, SOLAR, and OUTLOOK, and a 'Pages' button. The page title is 'Management System'. Below the title is a navigation bar with links: 'Dashboard', 'All Tasks', 'Profile', and 'About Developer'. The 'Profile' link is highlighted. The main content area is titled 'User Profile View'. Below this title, it says 'Below are the details for the system's demo user record:'. A white box contains the following information: 'User ID: 1', 'Username: raina\_kishan', 'Full Name: Raina Kishan S. Quejada', 'Email Address: rsquejada@ft.edu.ph', and 'Account Created: 2026-09-27 13:52:07'. At the bottom of the page, there is a footer that reads '© 2026 QUEJADA TA 3 Management System | IT0049'. A small orange flame icon is visible in the bottom right corner of the page.

## ABOUT DEVELOPER

The screenshot shows a web browser window with the address bar displaying 'localhost:8080/about'. The browser's address bar also shows icons for CANVAS, SOLAR, and OUTLOOK, and a 'Pages' button. The page title is 'Management System'. Below the title is a navigation bar with links: 'Dashboard', 'All Tasks', 'Profile', and 'About Developer'. The 'About Developer' link is highlighted. The main content area is titled 'About the Developer'. Below this title, there is a white box containing the following information: 'Developer Assignment Metadata', 'Student Name: Quejada, Raina Kishan S.', 'Course & Section: IT0049 / TW35', and 'Course Title: Web System Technologies'. Below this box, there is a paragraph of text: 'This assessment system handles task segregation using custom structural MVC logic architecture backed with CodeIgniter 4 framework routines.' At the bottom of the page, there is a footer that reads '© 2026 QUEJADA TA 3 Management System | IT0049'. A small orange flame icon is visible in the bottom right corner of the page.

## MIGRATIONS

Server: 127.0.0.1 » Database: tasks\_db » Table: migrations

## USERS

The screenshot shows the phpMyAdmin interface for a database named 'tasks\_db'. The 'USERS' table is selected, and its structure is displayed. The table has five columns: 'id', 'username', 'full\_name', 'email', and 'created\_at'. A single row of data is shown, representing a user named 'raina\_kishan'.

| id | username     | full_name               | email                | created_at          |
|----|--------------|-------------------------|----------------------|---------------------|
| 1  | raina_kishan | Raina Kishan S. Quejada | rsquejada@fit.edu.ph | 2026-09-27 13:52:07 |

### Submission Requirements:

- A link to a GitHub repository containing your raw project files, including your database export or migration and seeder files.
- A link to your hosted, working version of the application.
